Generic FHIR Receiver

Emergency supply of medication

Receiving and Processing Pharmacy Medication Messages

Pharmacy Medication summary messages will be received into SystmOne as a task with a type of ‘Pharmacy Emergency Medication Summary Document Received’.

Once this task has been actioned, it will be imported into a document management batch which can be viewed on the Acquired Documents screen (Workflow>Document Management>Acquired Documents).
These instructions are correct at the date of writing. For further assistance, consult the SystmOne Online Help.

The document can be processed from the Acquired Documents screen.
These instructions are correct at the date of writing. For further assistance, consult the SystmOne Online Help.

The summary document will display details of the medication(s) that took place at the pharmacy. Once this has been processed, the user can choose to add the medication(s) to the patient’s SystmOne record. If this is added, it will be shown in the Journal with a read code added to signify that an emergency supply of medication has taken place and also in the Medication node in the patient record as an ‘Other Medication’.
